SandBox Eclipse

Good to know:

This firmware adds a number of options.
It can happen that there are some bugs
around.

Don't forget to submit what you discovered on
the forum :))

All fixes in the future will be done without
having to flash again the dreambox :))
A simple FTP transfer in the root directory of
your HD will make the update.

Pre-requisite:

- **Imperative: to read the new official manual of Dream Multimedia !** The SandBox Eclipse is based on Enigma whose functions are explained in this official guide.
- A Dreambox DM7000S
- An additional hard disk or compact CF flash of 128 Mbs.
- A FTP client

Installation:

Before flashing, copy in the root of your hard
disk the file 'setup.tar.bz2'
Once copied, flash your dreambox with the
firmware 'eclipse.img'

!! the Erase flash is not necessary!!

Once your dreambox ready, at the boot it will
detect the presence of the file setup and will
make the installation like a good fellow :))

Attention, please wait, the installation will
take around 1 minute, patience.....

Then, configure your parameters as usual.

IP by default: 192.168.1.2

For the future, all file 'update' that will be
copied will be installed automatically.

Firmware description:

- ✓ Simple (really) installation :))
- ✓ mkcramfs/uncramfs ready (/var/local/bin)
- ✓ ltrace ready
- ✓ More of problem of space lack for your preferences
- ✓ 12 skins

- To fix the Tuxnews mode
- Refixer Doom, don't understand why he/it walks more.. grrrr
- Refixer the touched... grrr must be silliness it started
- To finish the pack Java Kaffe and change of the paths in the scripts... grrrr

Questions / Answers:

Q: Where is the /var to copy my settings?

A: Now your VAR is in / hdd/local/var

Two choices:

- DreamEdit to use you the program with the usual functions.
- Or you copy data of the index enigma - > /hdd/local/var/

Q: How in the future to copy the new version of Enigma for what is taken in charge automatically?

A: Merely while copying the new version by FTP in / local/bin /
This version will be used automatically at reboot.

Q: How to add a skin in the future?

A: Merely while copying your skin inside /local/share/tuxbox

Q: I add a program, but I lack a library file?

A: Copy the missing file inside /local/lib

Q: I want to try another firmware, can I return to my SandBox Éclipse after?

A: Yes, if you didn't erase the index' local' of your hard disk.

Flash only the firmware' eclipse.img'

You will recover your original settings :))

Q: And after for the updates?

A: For every new pack, you should only recopy the update pack in your hard disk and reset your dream. So corrections / improvements all will be made automatically.

Q: How I make to start Doom or the Game Boy emulator ?

A: At the boot of your dreambox, you have a menu on your LCD display: 3 options are available

- Enigma - > plain Starting
- Doom - > Launching of Doom

- Gboy - > Launching of your emulator

Q: How do I make if I want to change the ROM for the emulator?

A:.....???

Q: I have started Tuxmail, but I cannot read any mail?

A: Edit the settings file, by inserting the correct parameters for your mail account.

Q : I am a big bozo and I want to see everything without paying. How do I do ?

R : Go see elsewhere!

Q : being a big bozo I find abnormal that you didn't provide everything that it is necessary to pirate free

A : One also finds that you are a big bozo !

Q : You don't like the big bozos at all

A : No !

Q : If I send a private message to know how to get all for free, will you answer?

R : No, we just delete your account on spot !
